commoditized

IBM's AUTONOMOUS SECURITY RESPONSE

- 1 Elevate Cybersecurity Operations**
Digital & human workers, agentic & autonomous response with human control
- 2 Autonomous Threat Operations**
Machine-speed triage, investigation & response integrated in existing platforms
- 3 Autonomous Vulnerability Identification & Remediation**
Validated, signed fixes with prioritization across your IT estate
- 4 Proactive Assessment**
Frontier AI cyber resilience, compensating controls, risk impact

upto 85%

of alerts triaged

1 Elevate Cybersecurity Operations with Autonomous Security

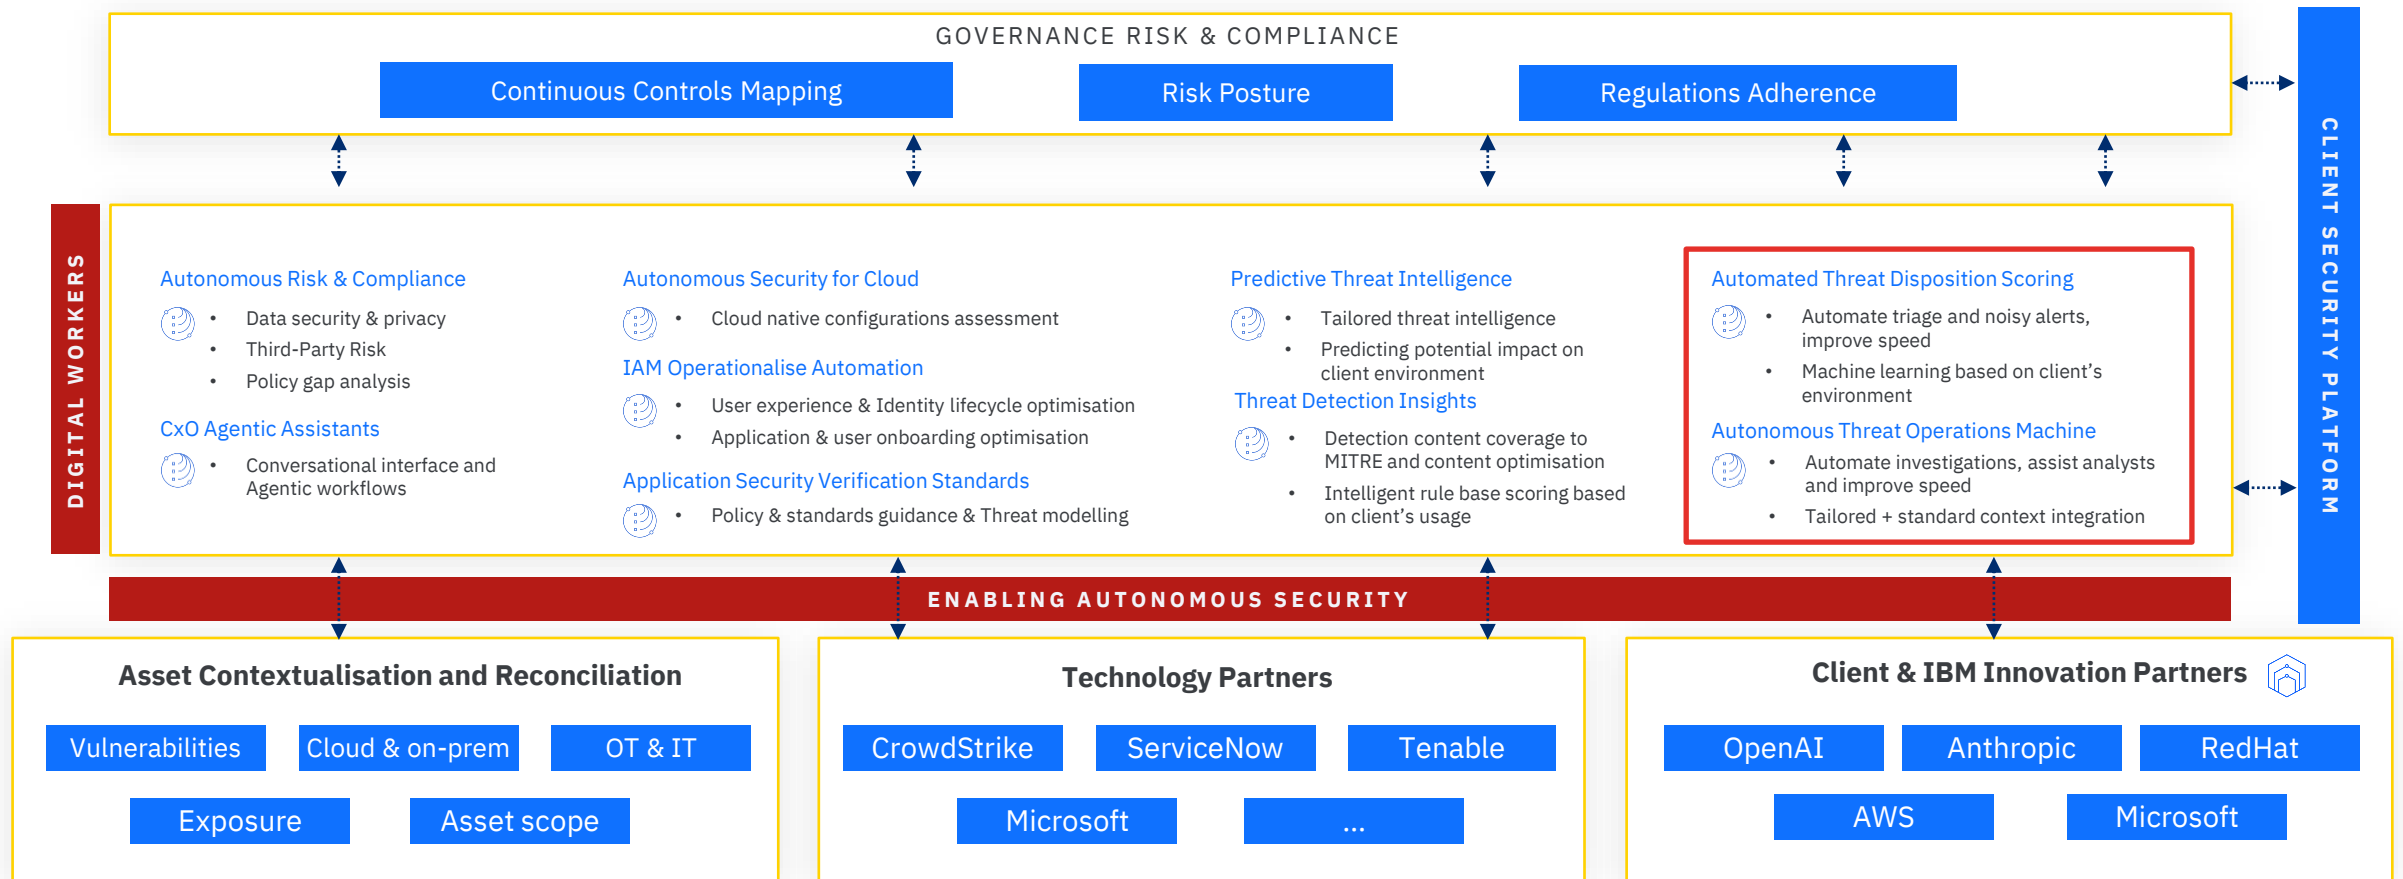

Demo Autonomous Security

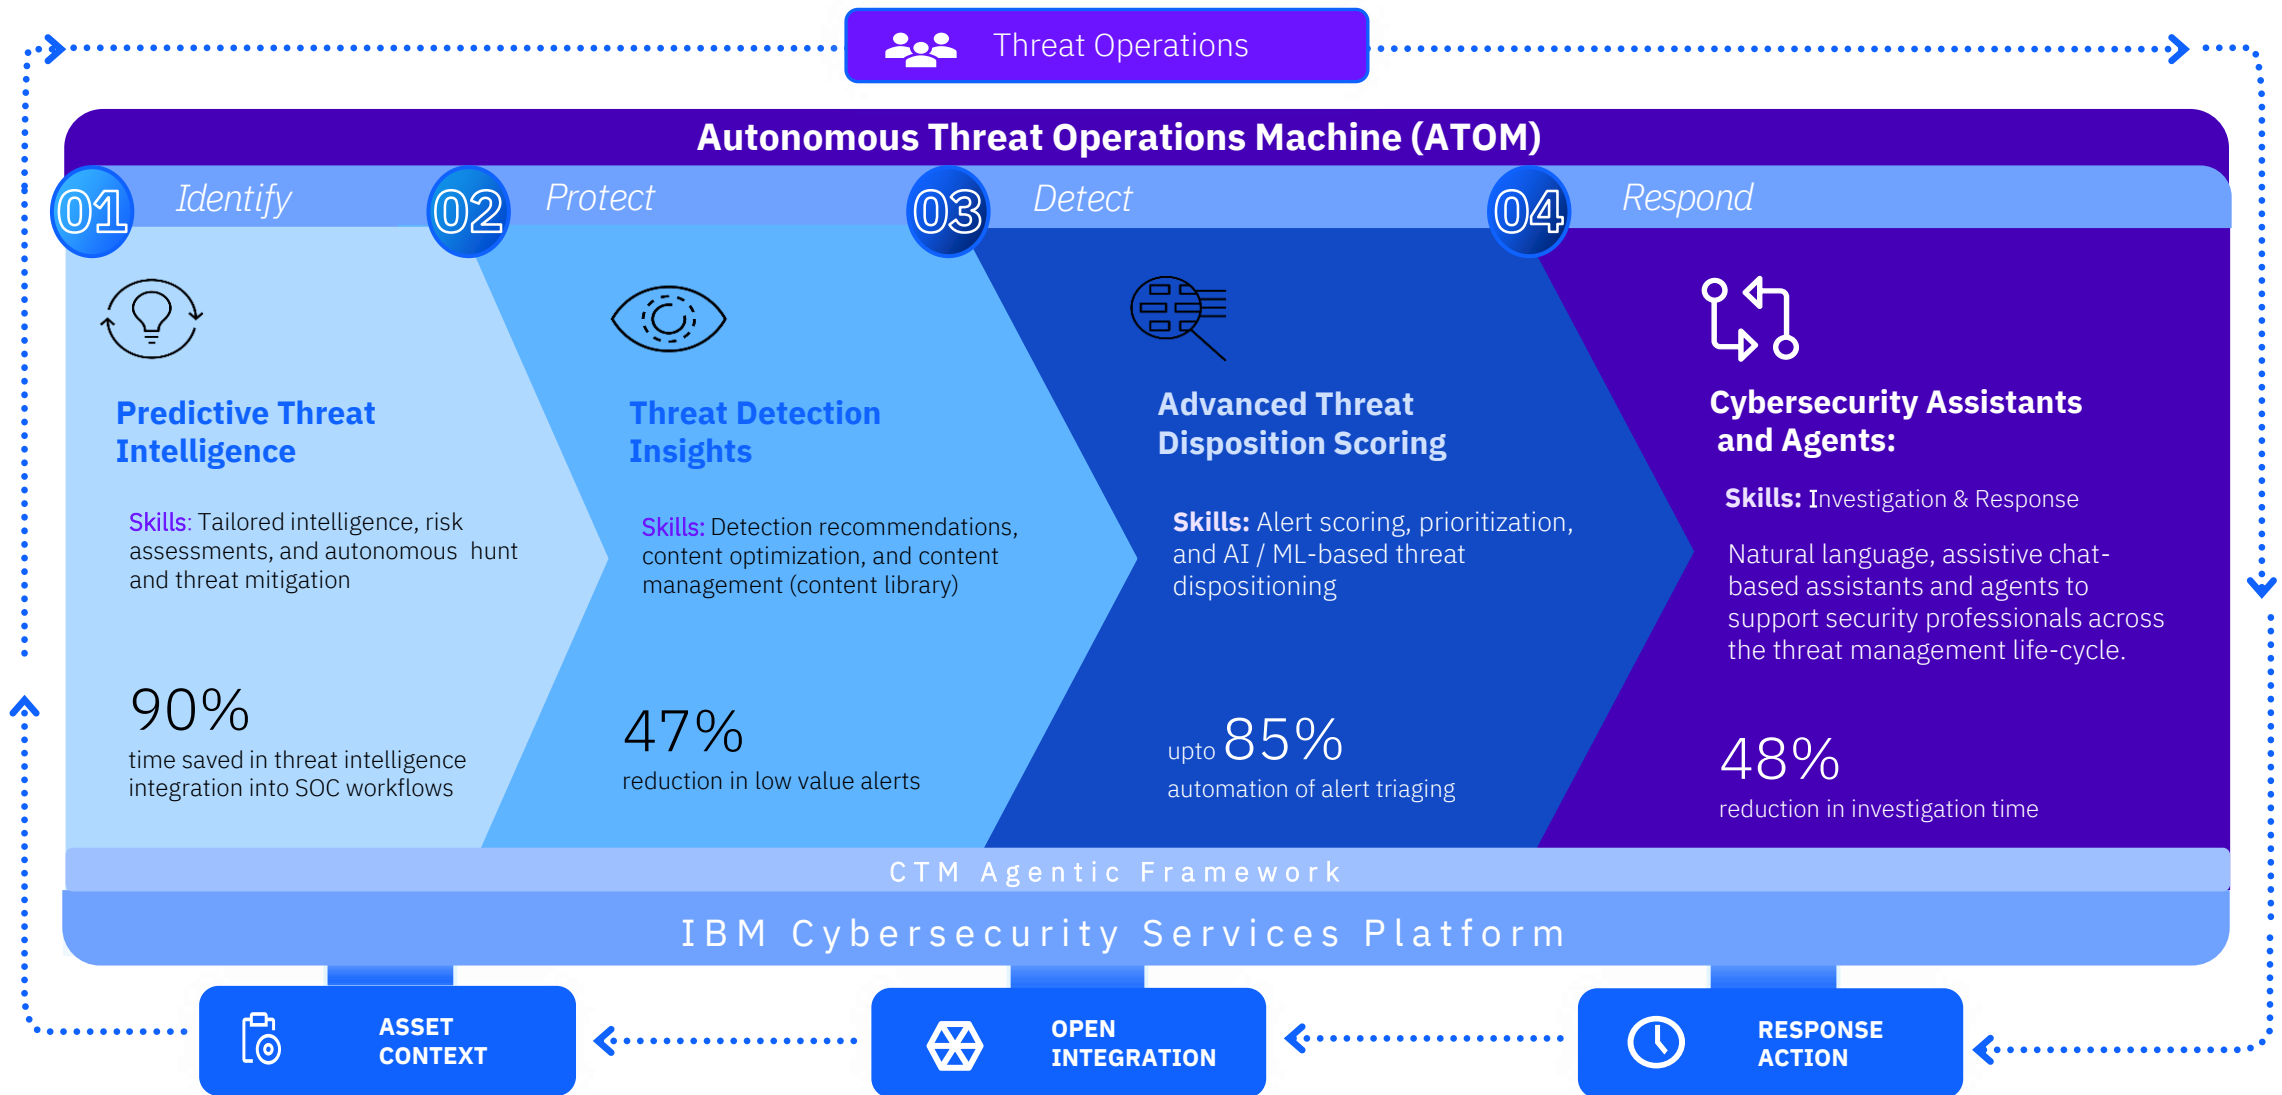

1 Elevate Cybersecurity Operations

Autonomous Security by leveraging Digital Workers and Agentic AI

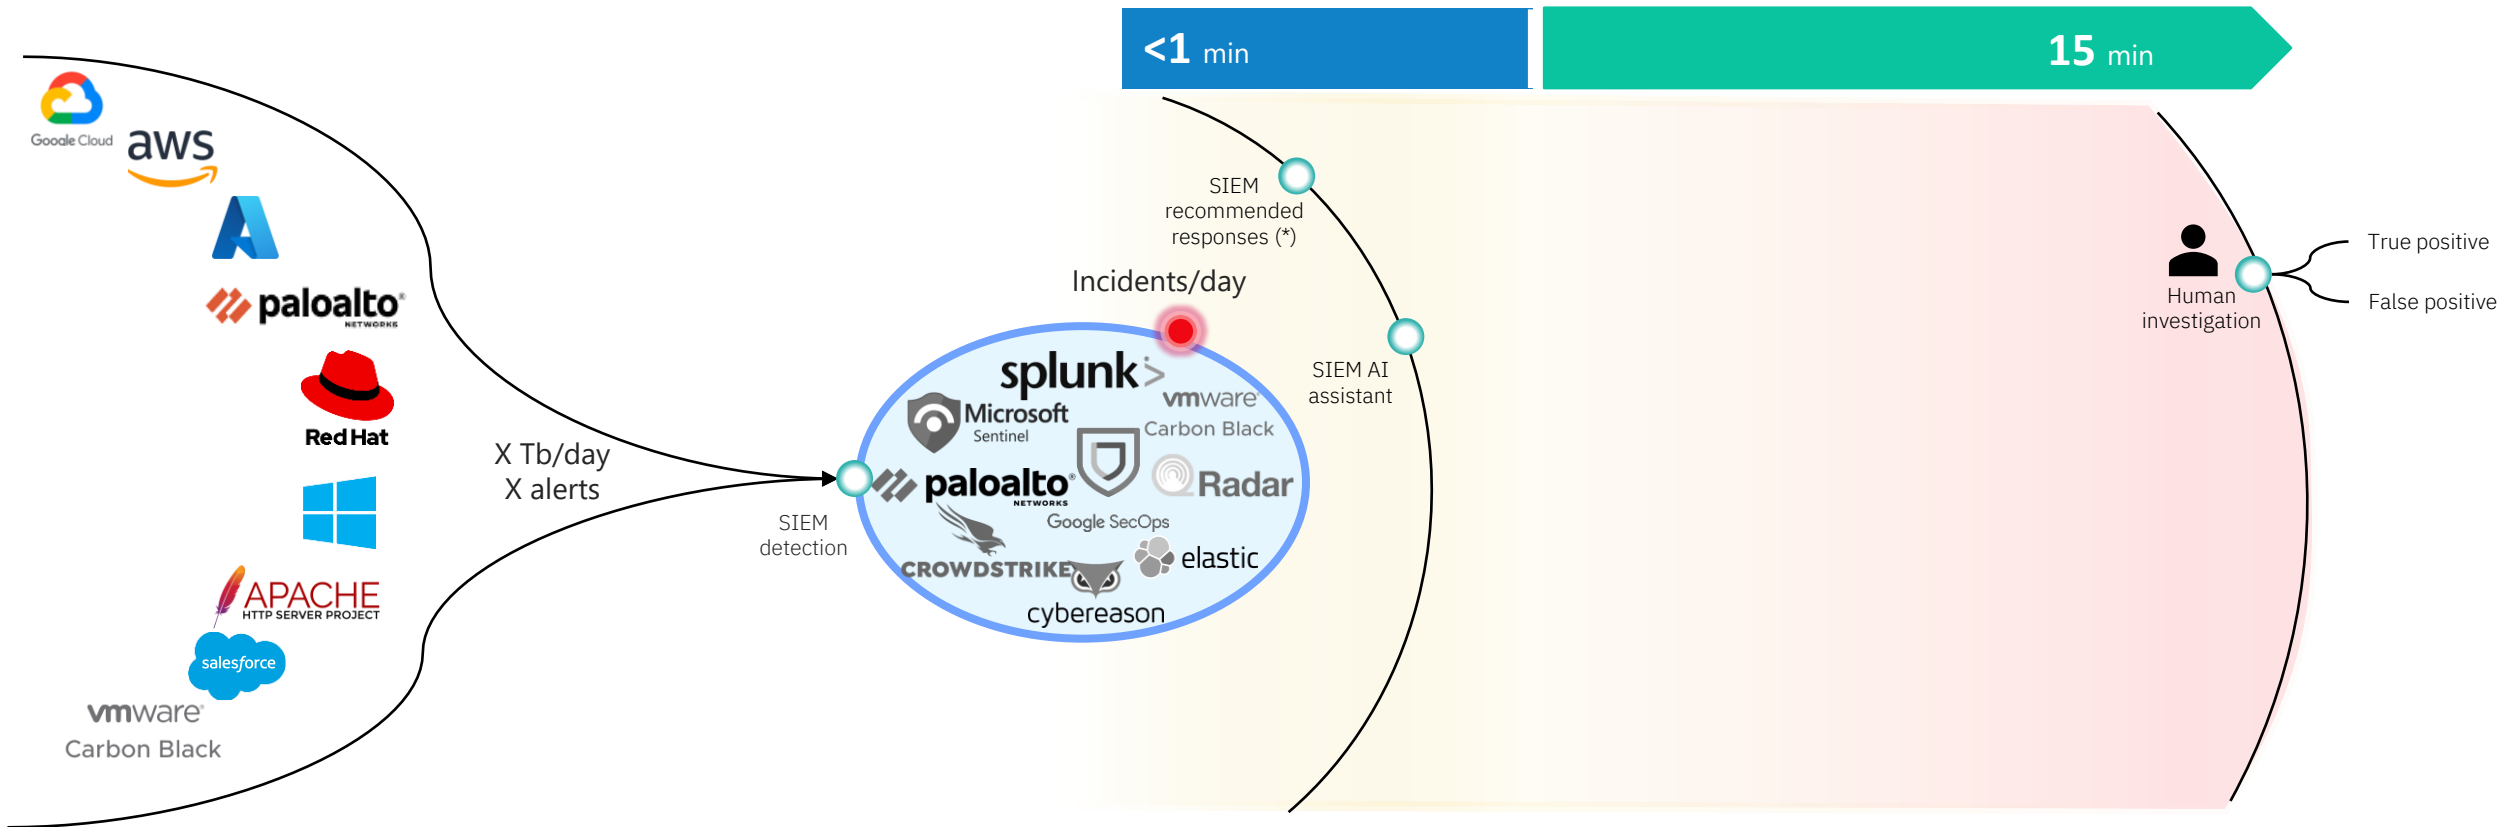

2 Autonomous Threat Operations

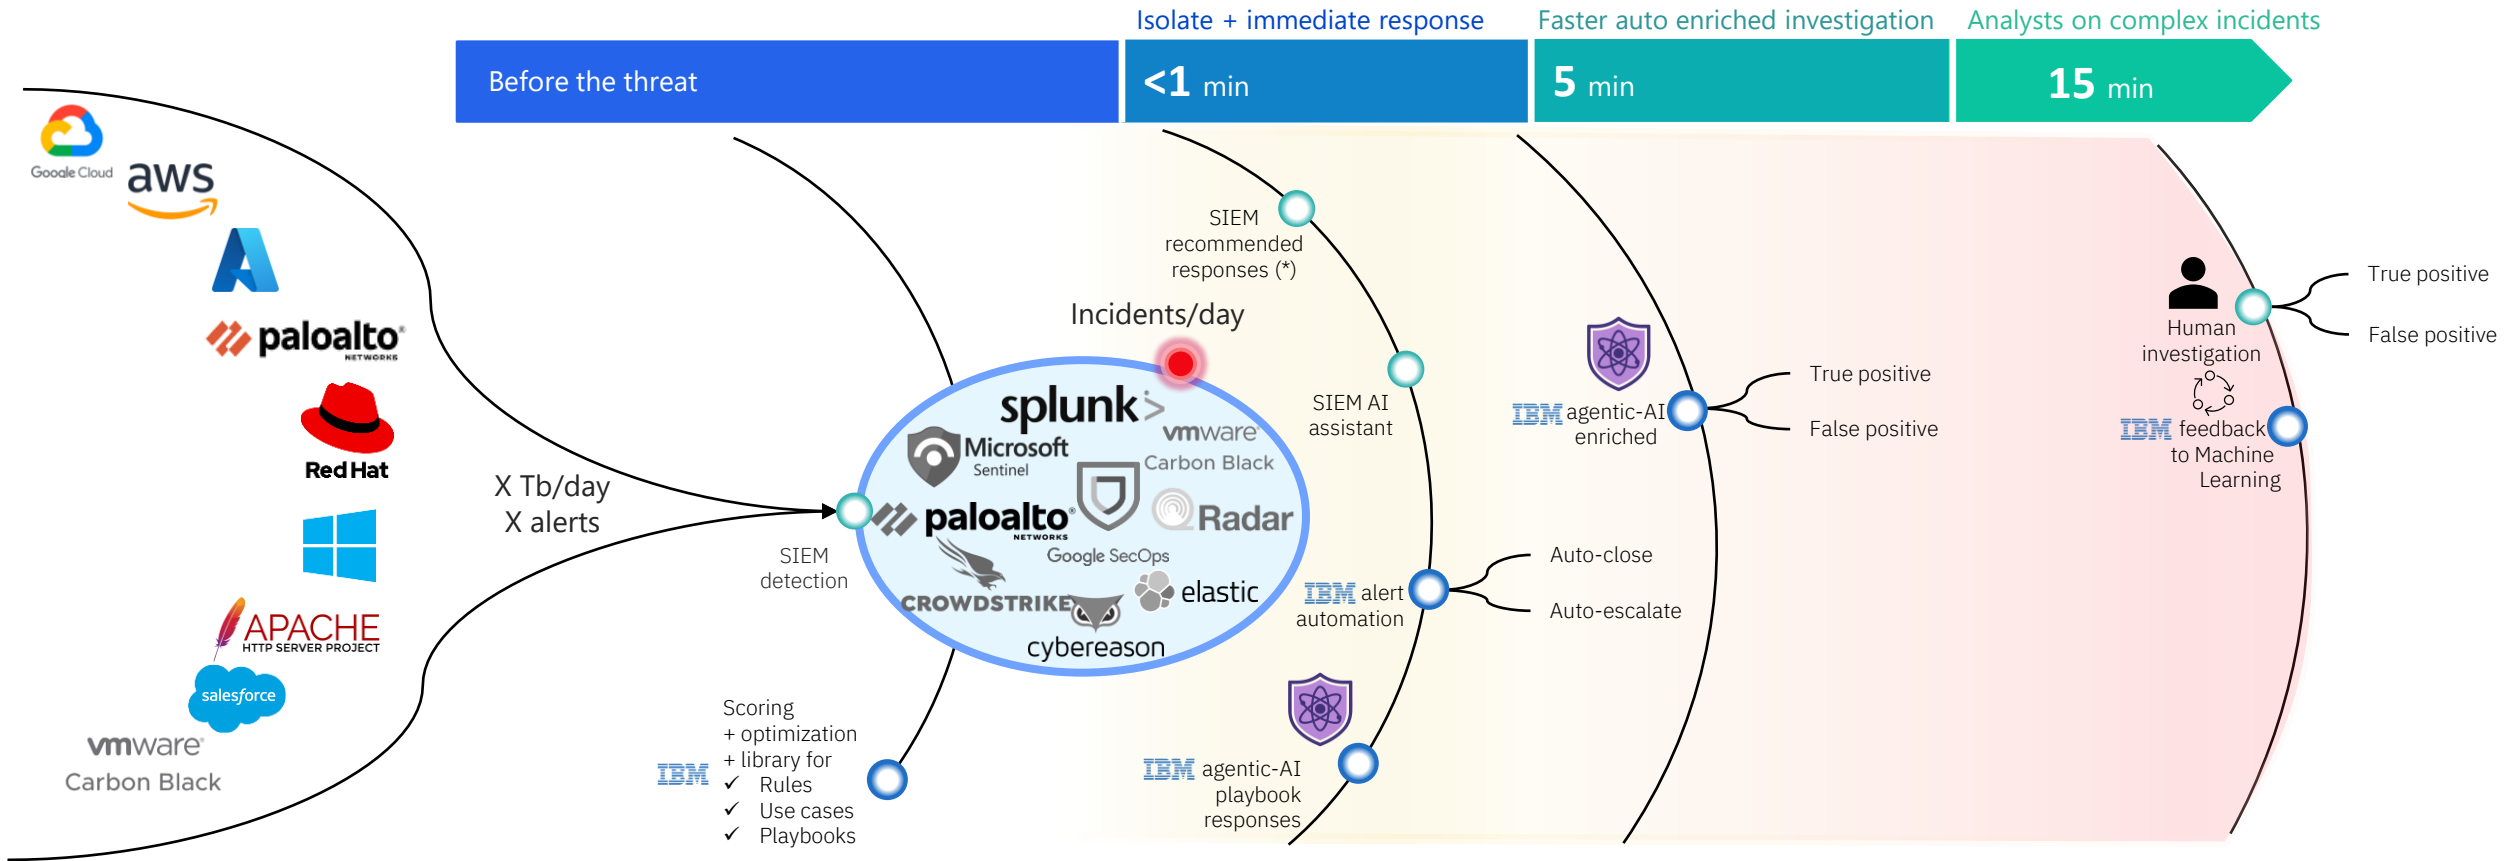

2 Autonomous Threat Operations

SIEM tooling delivers scalable incident identification

2 Autonomous Threat Operations

SIEM tooling + IBM AI Assets Optimize SecOps Cost & Efficiency

Ingest

Native Compatibility: ATOM can work natively with SIEM — when API connectors are setup.

Enrich

Preserve Native SIEM Investments: ATOM adds autonomous execution and predictive intelligence on top of your existing licensing — maximizing ROI without rip-and-replace.

Orchestrate

Hybrid SOC Execution: ATOM executes investigations and response across both native SIEM tools and others, purpose-built for hybrid SOC environments with diverse toolchains.

Asset Data Intelligence Integration

ATOM can leverage asset intelligence data lake as the primary telemetry backbone, querying and correlating data at scale to fuel autonomous threat hunting and investigation workflows.

Demo ATOM

3 Autonomous Vulnerability Identification & Remediation

From identifying vulnerabilities to building the resilience to respond continuously, at scale.

ANTHROPIC

Project Glasswing, IBM

Claude Mythos, restricted frontier model

ANTHROPIC

OPENAI

Project Daybreak, IBM

GPT 5.5 Cyber + IBM Harness

IBM + RED HAT

Project Lightwell

Secure the open-source software supply chain

THE SCALE BEHIND ALL THREE

70+ Years

of AI leadership, from Deep Blue to watsonx

\$8B+ / Year

in R&D, one of the world's largest programs

Trusted AI

pioneer in explainable, governed AI

Enterprise Built

designed for scale, security and compliance

4 Proactive Assessment

Discover Cyber Resilience with Frontier AI

Discover

Map Your Risk Posture

Work with your team to prove the value of autonomy – fast.

- Assess current state and autonomy readiness.
- Identify high-impact use cases
- Prioritized risk reduction roadmap
- Build ROI and business case

Clear value, prioritized use cases, and executive alignment.

2-4 Weeks

Activate

Build, Prove, & Activate

With your team turn use cases into autonomous execution.

- Establish data, integration and control foundations.
- Deploy autonomous workflows (digital labor)
- Integrate with existing tools and processes
- Operationalize initial Use Cases

Autonomous workflows running in production.

2-3 Months

Run

Operationalize & Scale Autonomous Security

With your team continuously expand and optimize outcomes.

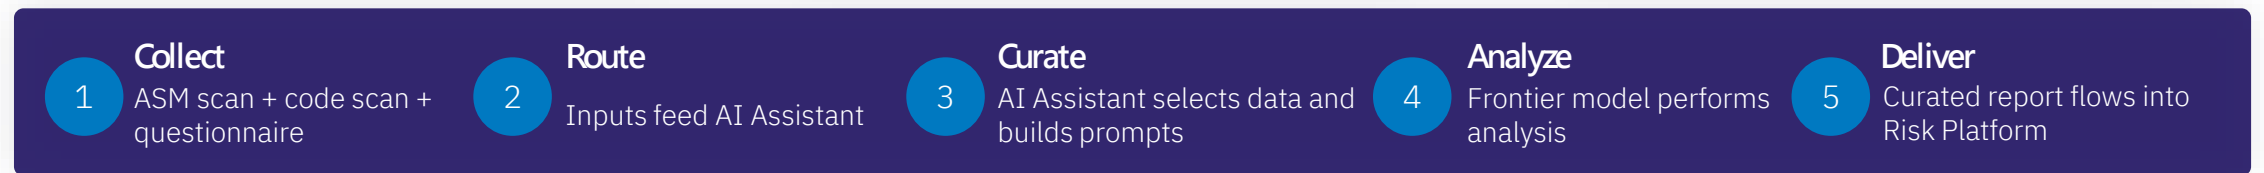

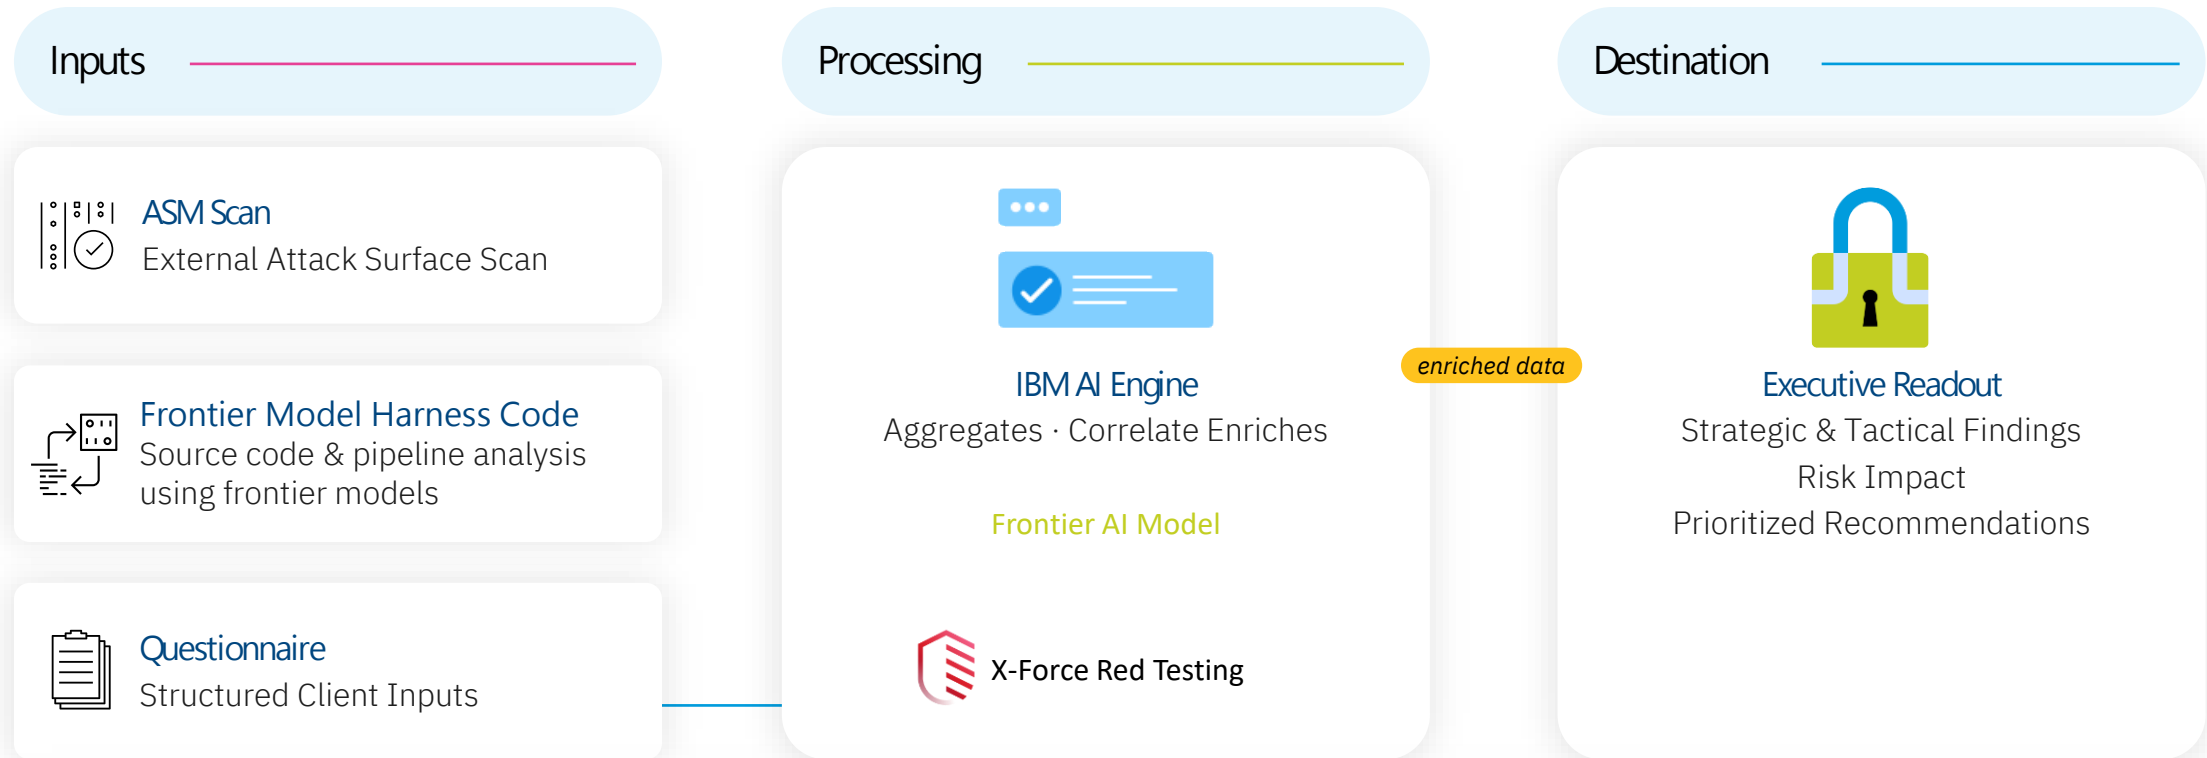

- Expand across domains and use cases
- Continuously optimize workflows and outcomes
- Align to evolving business risk and priorities
- Co-create new autonomous capabilities

Self Optimizing, continuously improving security program.

4 Proactive Assessment

Tailored prioritization and guidance infused with Frontier AI

Thank you for the great interactions!

Feel like partnering up with our assets and your people?

Exchange some ideas on your delivery?

Brainstorm on strategies?
