

MC2MC

Azure Web Application Firewall 🔥 in ACTION!

Let's introduce

VITAS

Software Engineer @ 4Dotnet

Blogging about Azure, .NET, Git and architecture.

Monitor Your Waf using workbooks

Small blog on how to monitor your WAF using Azure Workbooks.

October 31, 2025 · 1 min · 108 words · Mart de Graaf

Troubleshoot Web Application Firewall in Production

How do you troubleshoot a Web Application Firewall in production? How can you find false positives? In this blog I will share some tips and tricks.

October 28, 2025 · 5 min · 1047 words · Mart de Graaf

Getting Started With Application Gateway

CERTIFICATION

Microsoft Certified: Azure Solutions Architect Expert

Renew by November 2, 2025 at 12:59 AM (UTC +01:00) • Earned on November 1, 2023

[View certification details](#)

CERTIFICATION

Microsoft Certified: Azure Security Engineer Associate

Renew by February 9, 2026 at 12:59 AM (UTC +01:00) • Earned on February 8, 2023

[View certification details](#)

CERTIFICATION

Microsoft Certified: Azure Developer Associate

Expires on July 3, 2026 at 1:59 AM (UTC +02:00) • Earned on July 2, 2020

Let's Introduce Mr. Havinga

Mr. Havinga

Mr. Havinga

ETHANOL

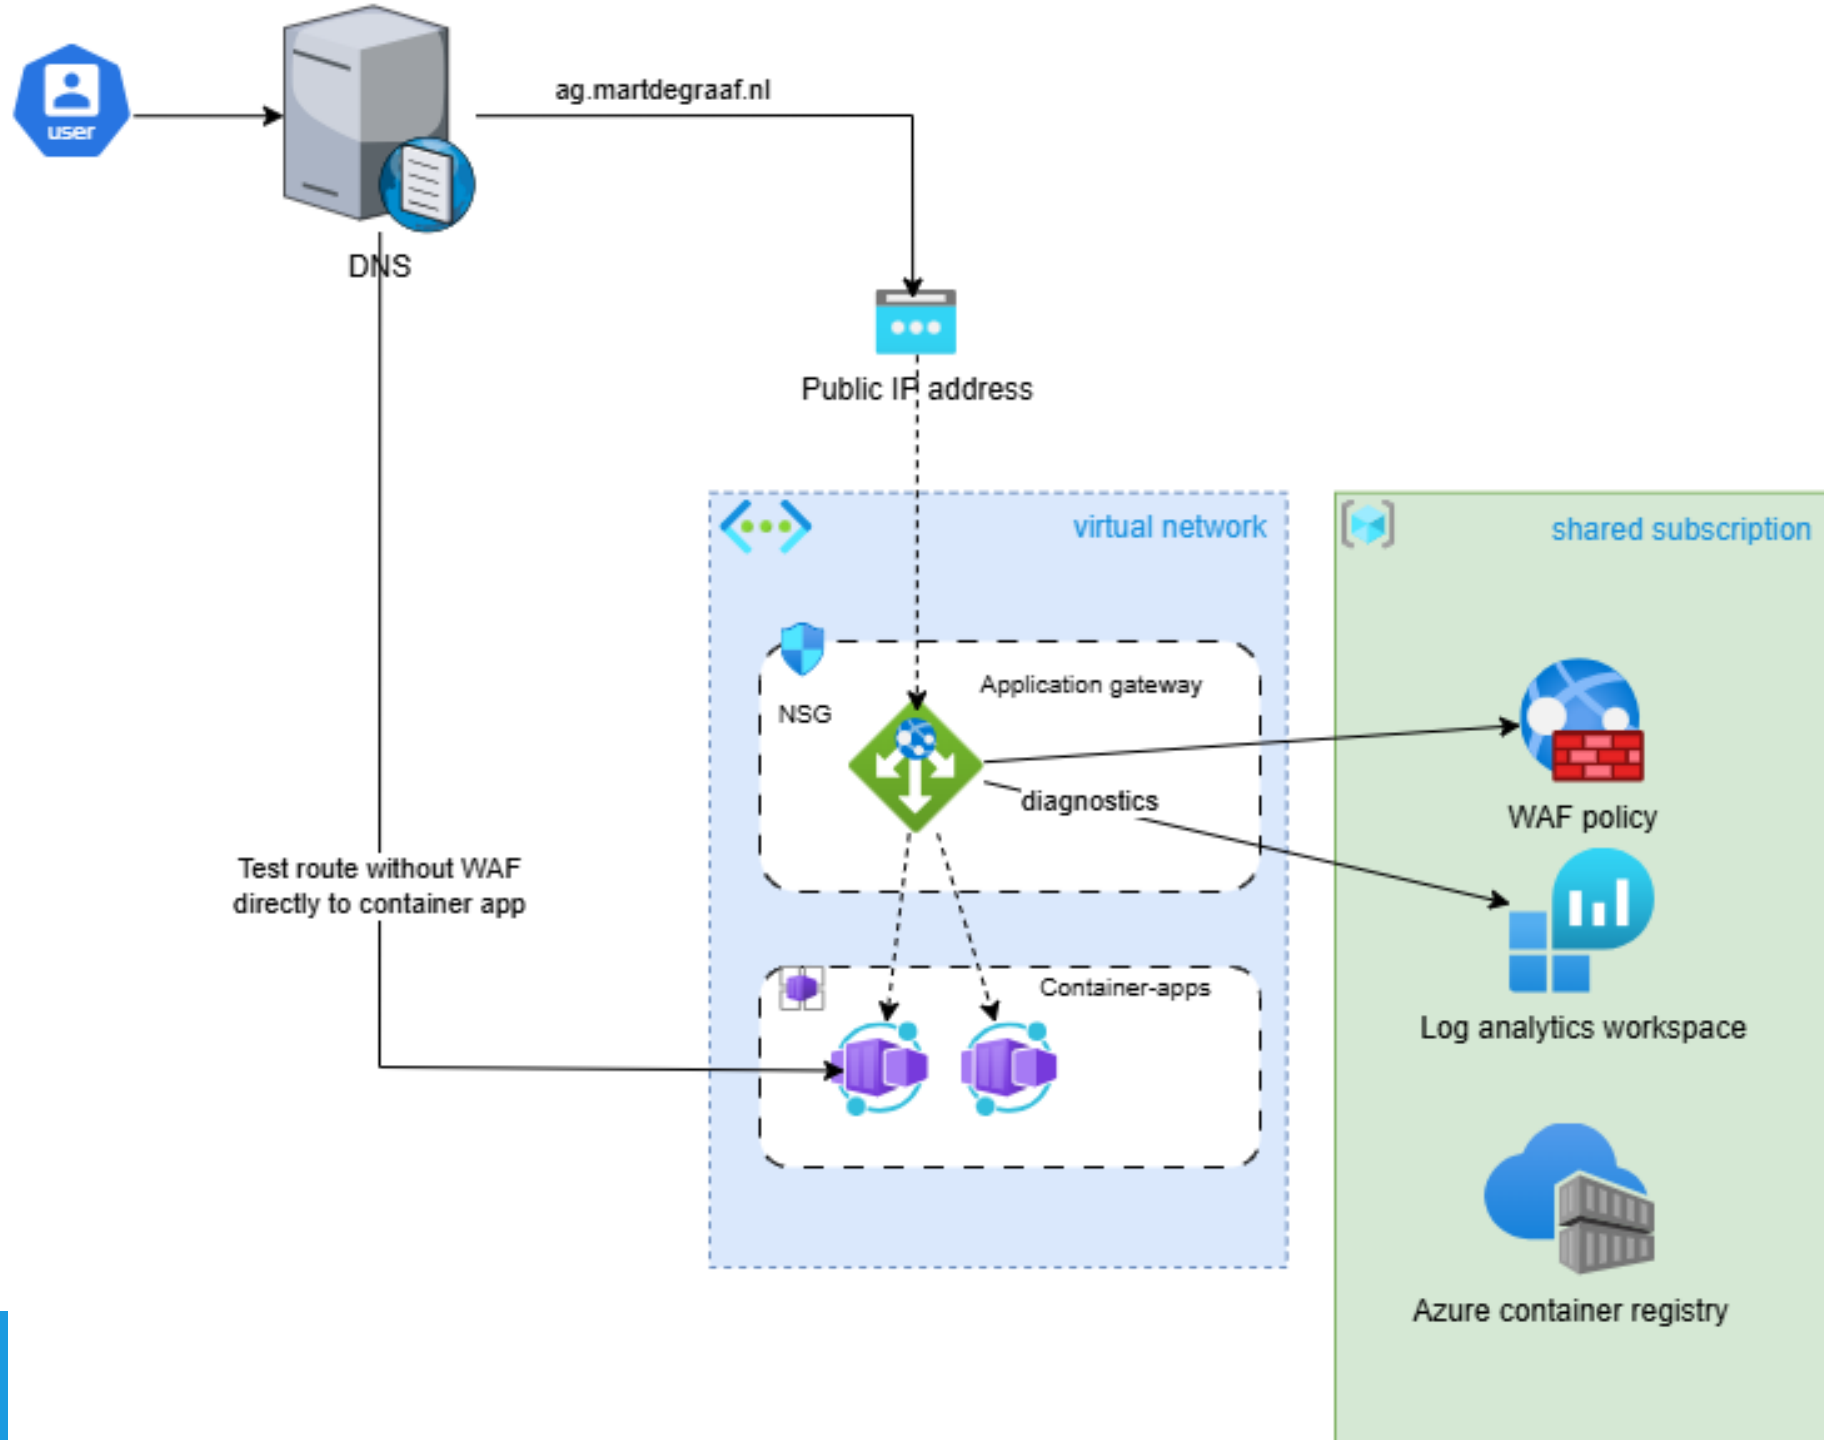

**“Mr Havinga is not having a
great day”**

Prevention

Detection

Demo

WAF Testing Dashboard

Test Azure Application Gateway Web Application Firewall protection with OWASP 3.2 rules

● Health Check

Basic connectivity test to verify the application is running

Test Health Check

● Safe API Call

Normal API endpoint that should pass through WAF without issues

Test Safe Endpoint

● SQL Injection Attack

Test SQL injection patterns that should be blocked by OWASP rules

1' OR '1'='1

Test SQL Injection (Should be Blocked)

● XSS Attack

Test cross-site scripting payloads that should be blocked

<script>alert('XSS')</script>

Test XSS (Should be Blocked)

● Path Traversal Attack

Test directory traversal attempts that should be blocked

../../../../etc/passwd

Test Path Traversal (Should be Blocked)

● Bot Attack Simulation

Test malicious bot patterns that should trigger Bot Manager rules

Test Bot Attack (Should be Blocked)

● Command Injection

Test command injection payloads that should be blocked

; ls -la

Test Command Injection (Should be Blocked)

● Malicious Payload

Test various malicious payloads that should be detected

<%eval request%>

Test Malicious Payload (Should be Blocked)

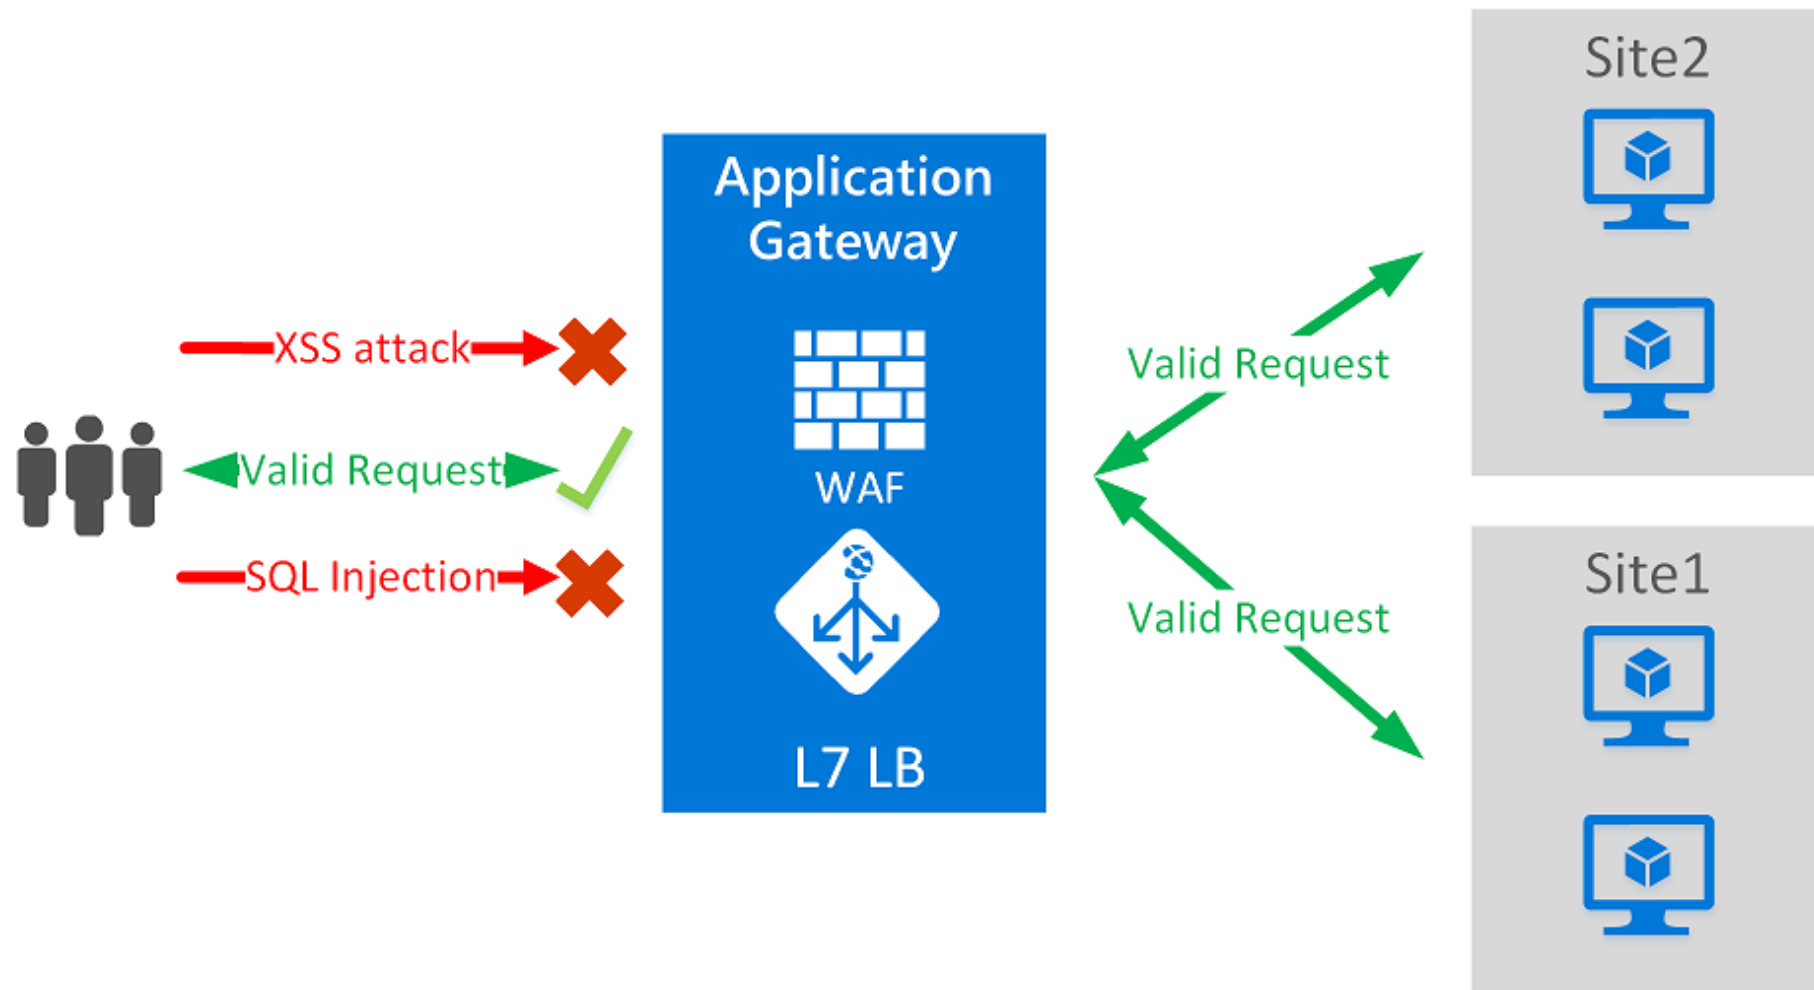

● Person Registration Demo

Real-life test: Register a person named "Meneer Havinga" to see if WAF blocks legitimate Dutch names

Meneer Havinga

havinga@example.nl

Register Person (Real-Life Test)

<https://learn.microsoft.com/en-us/azure/web-application-firewall/ag/ag-overview>

It depends

Key take-aways

- WAF protects against common OWASP attacks
- Prevention
- Detection
- Test your application with Mr. Havinga

EXPERT INSIGHT

The Azure Cloud Native Architecture Mapbook

Design and build Azure architectures for infrastructure,
applications, data, AI, and security

Second Edition

Foreword by

Scott Hanselman

Vice President, Developer Community, Microsoft

Stéphane Eyskens
